A NEW LIFE

Pressto Cobbler takes you through the process of making your favourite items look brand new again

City living brings many challenges, and shabby shoes and worn-in bags are two that can make your daily routine a little less pleasant. While not all shoes and handbags are created equally, they all require special attention after normal wear and tear. To make accessories work longer for you, the experts at Pressto Cobbler gave *Bazaar* three tips that will give your most-beloved items a new lease of life.

RESTORE: Regular treatment of cleaning and polishing is something that all footwear and bags require. The change in outdoor temperatures can alter the structure of natural materials, so getting a regular check-up is crucial to maintaining the overall design and construction.

REFRESH: The monsoon season brings a host of problems, but the growth of fungus on shoes and bags is one that can be avoided. Professionally treating materials and fabrics before and after the rains guarantees that they stay protected all year long.

RELIVE: Repair or replace soles, heels, and corners of bags when needed, so that permanent damage is not done. Through the use of dyes, the exact colour can be matched to the material. Store items with wooden shoe trees and in breathable bags to extend their wear when not in use. Presstoindia.com
